

Spend your time where it matters most.

Access patient information quickly, easily
and when you need it.

When it comes to your patient's care, your time is invaluable. With patient health records distributed across various sources, getting the vital information you need can be a time-consuming exercise.

The **Healthi for Hospitals** mobile application now allows you to access your patient's history from the national My Health Record system, as well as summary health information such as recent healthcare visits, medications, allergies and pathology reports. It has the potential to include additional internal data as required*.

Healthi for Hospitals gives you oversight of what your patients can see in the Healthi consumer application, helping you work together to better manage their health.

Clinicians can access their patient's data through
both Apple and Android devices

Personalisation of the application to include
your additional internal data*

“Healthi for Hospitals allows clinicians to access patient information quickly, easily and on demand, freeing up valuable time.”

Geoff Rohrsheim

Director of Chamonix Health
